

Our trip to Denmark

6th to 10th June 2016

On Monday, the 6th June 2016, we went to Denmark. We met at the Spandauer train station at 9.15 am. Then we went to Hamburg. There we changed trains. We went till Neumünster. There we had a break of about an hour. We went to the city centre to have a drink. Some children of our group ate something or went to some shops. After the break we went to Flensburg. The parents of the Danish students picked us up and we went to Grasten, a little Danish town.

At first we said our names and ate cake. Then we went outside and played a game called „Langball“. It was very funny. After this we explored the school yard. The Danish school is nice with many things to do. After this we got a delicious dinner. It was a special Danish meal: frikadelle, potatoes, salad - smorsous. That is meat, salad and potatoes. The dessert was buttermilk with cookies. We liked it, too. At the end we washed the dishes.

At 7 pm the parents of the Danish students came and took us home.

On Tuesday we went to the UNIVERSE-science-fun park. We went two hours by bus. You can make really exciting things there. For example: use a segway, splash with water, learn about different forms of energy, eat, fly drones, go into a museum, watch a 5D movie, go into a pixel world and visit the blue cube.

We arrived at 9 o'clock but the park opened at 10 o'clock. So we decided to climb on a small hill and we had a beautiful view over the whole park. After that we went to the entrance of the park. In front of the park, there was a big car lift. On one side of this huge

scale was a real car of 1500 kg. On the other side, there were ropes with which we could lift the car. We talked English the whole day. It was hard, but funny. When we came into the park, a tour guide waited for us. She explained the whole park to us. After that we had three hours left. We visited all attractions in small groups with our Danish partners. The science show was very interesting. Two young ladies showed us funny experiments with explosions. They worked with cold nitrogen and warm water. It was a hard but funny day. Today (8 June 2016, Wednesday) was an exciting day. At first we met at 7.50 am at school to go by bus to the Wadden Sea. We went there two hours by bus. The Wadden Sea is at the West Coast of Denmark. In front of the Fisheries and Maritime Museum in Esbjerg we met our guide. He told us a lot of interesting things for example that the Wadden Sea is a national park. He told us about low tide and high tide. After this we walked in the Wadden Sea. It was sooooo cold and windy.

There we caught crabs. We put the crabs in a bottle. The guide showed us how we can see if the crabs are female or male. After that we put the crabs again in the water. Then we

went to the Fisheries and Maritime Museum. There we could explore the museum with our Danish partner. After this we went back to school and we went home.

Do you want to know more about the Wadden Sea? This is what we have learned:

The Wadden Sea is a very special sea in the North of Germany and the South of Denmark. There we have high tide and low tide. Low tide is when the water goes away. When the water comes back, it is called high tide. The low tide lasts 6 hours and 12,5 minutes and the high tide lasts 6 hours and 12,5 minutes, too.

When it is very stormy the water rises higher than normal. Because of that people built dykes.

The Wadden Sea is a national park. A lot of animals for example crabs live there. You can see if a crab is female or male when you turn it. If there is a triangle it is male, if there is a half circle it is a female. The shells on the ground are very sharp. 10 kids cut their feet. Sand worms live under the wadden sand. It is a dangerous worm because it has little teeth. With its teeth he eats plankton, algae and other worms.

On Thursday, Paul woke up at 6.20 am and Jonas woke up at 6.30 am. Paul took a shower. Paul and Jonas ate cornflakes in the morning. Jonas made his lunch packet on his own. Paul went with Olliver to school. In school we listened to the presentations prepared by the Danes. The presentations were about: coal energy, wind energy, solar energy, natural gases and hydrogen cars. The presentations were very interesting. Then the German students presented their posters about energy.

After that we went to a big forest. On the way to the forest, Paul and Jonas listened to music. In the forest we played a game with cards. We loved it, we ran a lot. After the game we ate bread prepared over the fire. It was a really nice day and we enjoyed the cool time.

Friday was the day we went home. All people were sad because it was hard to say „Good bye“. At 8.30 am we met at the school with our backpacks. Then we went to the classroom of the Danish students. The teachers said thank you for this nice week. After that we went by car to Flensburg. In Flensburg we bought drinks and ice cream in a small shop. At 10 am we were in the train on the way to Neumünster. From Neumünster we went by train to Hamburg and from Hamburg we took a high speed train to Berlin. Here we met our parents. All kids were happy.
